Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The prior art differs from the present invention in that the present invention has a subwavelength grating comprising a plurality of periodic polymer channels and polymer-disperse liquid crystal channels, where the combined thickness of the PDLC channel and the polymer channel are substantially less than an optical wavelength (i.e. $(t_{\text{PDL}} + t_{\text{P}}) < \lambda$), the grating will exhibit form birefringence. As discussed below, the magnitude of the shift in polarization is proportional to the length of the grating. The subwavelength gratings can be designed to act as a half-wave or quarter-wave plate, respectively. Thus, an advantage of this process is that the birefringence of the material can be controlled by simple design parameters and optimized to a particular wavelength, rather than relying on the given birefringence of any material at that wavelength. The present gratings also can be used in the optical switch and reducing the switching voltage.

It is noted that Popovich also discloses the present invention in US patent No. 6,115,152 (9/5/2000), which was filed 9/4/99 and claimed the priority on 9/14/98. However, the present invention has earlier filing date 7/12/96 (US 5,942,157, issued 8/24/99).

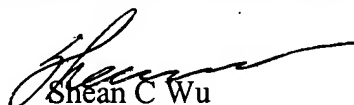

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
